

Press Brake Tooling
Product Range

Making the Impossible, Possible

Welcome to **Rolla-V**

► **We are Rolla-V, world-leading designers and manufacturers of specialist Press Brake Tools.**

Our state-of-the-art facilities reflect the tradition of generations of engineering in the industrial heart of the United Kingdom.

Based in the West Midlands, at the hub of the motorway network, it's easy to visit for a demonstration or to view your tools in action prior to delivery. With over 80 years of experience, Rolla-V supplies the most comprehensive range of Press Brake Tools available today.

With continued investment and an unrivalled reputation for quality and service, Rolla-V is the global centre of excellence for Press Brake Tools and bending technology.

We designed and patented the revolutionary Rolla-V over fifteen years ago. Since then, Rolla-V has become a favourite of every Press Brake manufacturer in the world, and won Innovative Product of the Year. Rolla-V is now sold by all major press brake tooling companies.

Rolla-V provides the definitive answer if you need to:

- Bend stainless steel, aluminium (or any aesthetic materials) with little or no marking
- Bend small flanges
- Bend near to a hole or slot without distortion
- Avoid tool contamination
- Prevent secondary expensive and unnecessary rework.

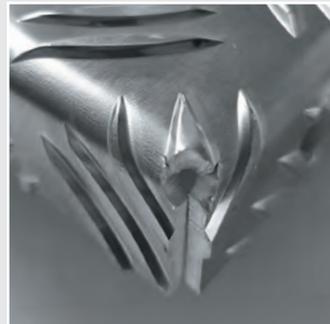

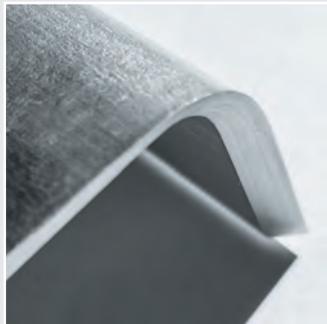

▶ **As the home of the revolutionary patented Rolla-V.**

We supply Press Brake Tools, from stock, for every make of Press Brake in the world including **Adira, Amada, Baykal, Bystronic, Durma, LVD, Safan and Trumpf.**

Most of our products are available for immediate dispatch, enabling you to tackle any project, of any size with complete confidence.

We have full CNC Press Brake testing facilities and also supply guillotine blades and a comprehensive range of auxiliary equipment.

The Rolla-V Range of Tools

▶ **Rolla-V dies are available to suit any manufacturer's machine.**

Several fixed sizes are offered as well as adjustable models which are ideal for heavy plate or large radius work.

Appropriate insert materials are used to suit the typical applications for each size of Rolla-V tool, although custom materials may be available on request.

Custom sizes and widths are also available for specific applications. Please call us to find out more.

Non-Standard lengths are available to order on all models

Application

RVP (models 1, 2 and 3) are; 60mm clamping widths

Suitable for Amada, Atlantic, Adira, Bystronic Euro, Beyeler Euro-B, CR Electronic, Durmazlar, Ermaskan, Gasparini, Guifil, Haco, Promecam.

RVS (models 1, 2) are 14mm tang

Suitable for Amada style single V holder.

RVT (models 1, 2 and 3) are 12.7mm/13.0mm tang

Suitable for Bystronic, Hammerle, Beyeler, Edwards, Safan, SMD, Trumpf.

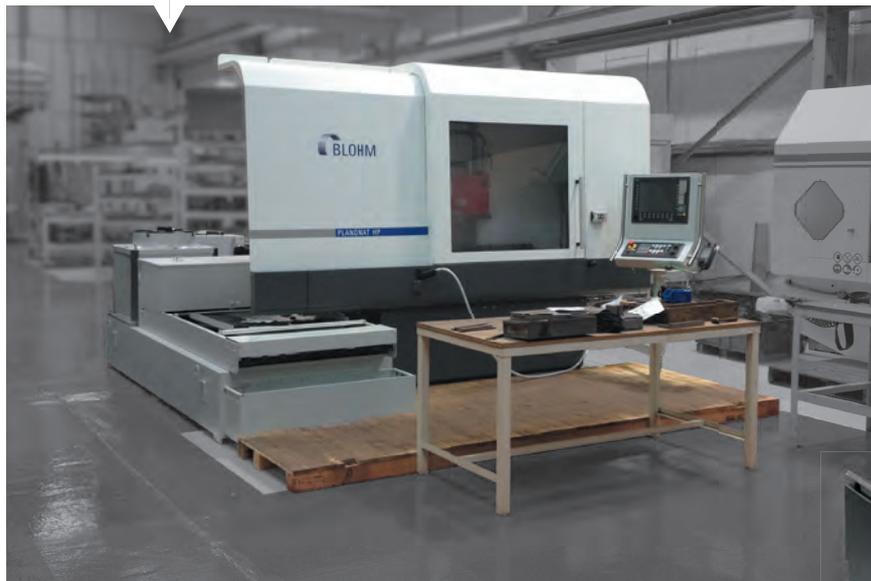

RVT90 (models 1, 2 and 3) are 12.7mm offset tang

Suitable for LVD with offset tang.

RVM (models 2.5, 3, 3.5 and 4)

Universal clamping with base or tang – all styles are available – suitable for any machine brand.

If you cannot see your machine type listed here we can provide advice and make custom fittings to your specification – please call us.

Rolla-V Materials

Inserts	All models	Through hardened up to HRC60. 70 Rockwell available on request.
Body	All models	42CrMo4 tensile strength 1100-1200M/mm ² surface hardened to HRC55

Non-standard insert materials and HRc values are available for specific applications – please call us

Advantages of using Rolla-V

- ▶ Highly precision ground
- ▶ Modular
- ▶ Avoid traditional bending marks
- ▶ Minimal marking
- ▶ Extremely short flanges possible
- ▶ No tool material cross contamination
- ▶ Bend close to holes and cut-outs with no deformation
- ▶ Fewer tool changes
- ▶ Bends laser cut sheets with no tool damage
- ▶ Ideal for radius bending
- ▶ Exact inside radius
- ▶ Ideal for tapered or feathered edges
- ▶ Bends up to 30mm thick material (subject to model selected)

Adjustables are usually used for bending thick materials or for bending large radii - because specific material specs vary we do not provide detailed bend data. Flaring or hole distortion is much reduced, but is influenced by material specification. Radius work is greatly affected by spring-back of the specific material being bent. Minimum flange sizes are greatly affected by the squareness of the component edge.

XT1

For thinner gauge material

- ▶ **Thickness**
0.3mm -1.2mm
- ▶ **Standard Lengths**
50mm, 100mm, 200mm and 500mm
- ▶ **Minimum Flange**
3.2mm
- ▶ **Maximum capacity**
50 Tonnes

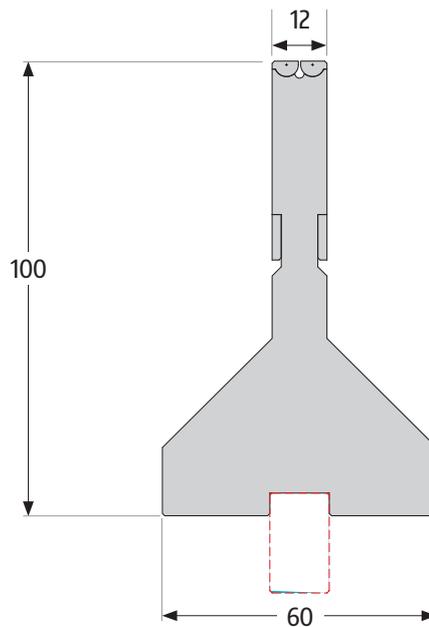

The latest addition to the Rolla-V family - the XT1 and XT2 are specifically made for thinner gauge material.

These tools are ideal for thin materials with short flanges or intricate components.

CNC Modular Rolla-V

The world's first Modular Rolla-V CNC Controlled Press Brake Tooling Die, change the "V" size from 55mm wide up to 142mm with a touch of one button.

Bend up to 20mm material.

Calculations

- ▶ These formulae are for guideline purposes only – they will provide a good indicator of what tonnage, flange size or maximum outside radius is possible for a specific bend.

Our experience shows that whilst these calculations provide theoretical values, in practice it is usually possible to obtain a more favourable result.

We would recommend that if your requirement is close to the calculated value, a test bend using your material and tooling may be advisable to confirm what result is actually possible.

Key:

Dimension A  Rotor centre distance

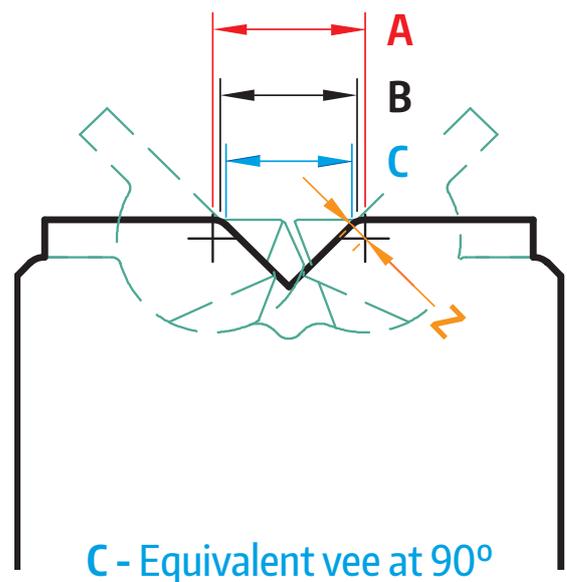

Dimension B  Equivalent V-width for calculating flange sizes

Dimension C  Equivalent V-width for calculating tonnages (rotor at 90°)

Dimension Z  Equivalent corner radius

Dimensions

	A (mm)	B (mm)	C (mm)	Z (mm)
XT1	5.7	5.04	4.57	0.80
XT2	10.0	9.21	8.66	0.95
Model 1	8.0	7.17	6.59	1.00
Model 2	15.0	13.92	13.16	1.30
Model 2.5	28.0	26.34	25.17	2.00
Model 3	38.0	33.44	30.22	5.50
Model 3.5	60.0	57.10	55.05	3.50
Model 4	85.0	80.03	76.51	6.00

C - Equivalent vee at 90°

Force (tonnage) calculation

$$\text{Force (Kn/m)} = \frac{Rm \times T^2}{C} \times \left(1 + \frac{4 \times T}{C}\right)$$

Aluminium: Rm = 200-300 N/mm²

Mild Steel: Rm = 370-450 N/mm²

Stainless: Rm = 650-700 N/mm²

Example:

Bend force calculation example:
2mm Aluminium in a Model 2

$$\text{Force (Kn/m)} = \frac{300 \times 2^2}{13.16} \times \left(1 + \frac{4 \times 2}{13.16}\right)$$

$$91.185 \times 1.6079 = 146.62 \text{Kn/m}$$

Bending force = **146.62Kn/m**

Max. outside radius calculation

$$\text{Rule 1) Max ER} = \sqrt{(C^2/2)} - (T + Z)$$

Rule 2) IF ER IS > B / 2.2, ER = B / 2.2

Note: Whichever value is the greater is the maximum outside radius possible.

Example:

3mm Material in Model 2.5

$$\text{Rule One) ER} = \sqrt{(25.17^2/2)} - (3 + 2)$$
$$17.8 - 5 = 12.8$$

$$\text{Rule Two) } 2 = 26.34 / 2.2 = 11.97$$

12.8 (Rule One) is greater than 11.97 (Rule Two)

therefore **Max ER = R12.8mm**

Min. flange calculation

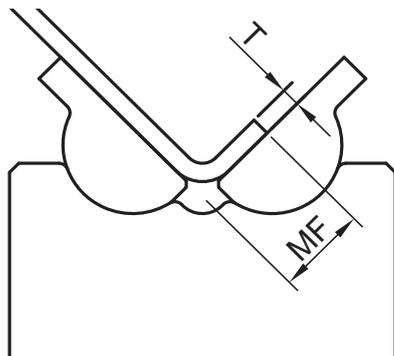

$$\text{Min flange (MF)} = \sqrt{(B^2/2)}$$

Example:

Min flange calculation example:
Model 1

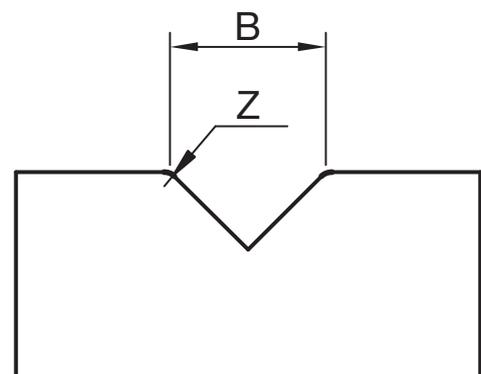

$$\text{Min flange (MF)} = \sqrt{(7.17^2/2)}$$
$$\sqrt{25.704} = 5.07$$

Min Flange = **5.07mm**
